

The figure displays three box plots side-by-side, comparing the distribution of 'number' (y-axis, 0 to 100) for two categories: 'blue' and 'orange' (x-axis). The plots show the median, quartiles, and range (whiskers) for each group, with outliers indicated by open circles.

- Plot 1 (Left):** The 'blue' group has a median around 45, with a range from approximately 25 to 75. The 'orange' group has a median around 40, with a range from approximately 35 to 45. There are outliers for both groups at approximately 85 and 95.
- Plot 2 (Middle):** The 'blue' group has a median around 45, with a range from approximately 25 to 75. The 'orange' group has a median around 55, with a range from approximately 45 to 65. There are outliers for both groups at approximately 85 and 95.
- Plot 3 (Right):** The 'blue' group has a median around 50, with a range from approximately 35 to 75. The 'orange' group has a median around 50, with a range from approximately 35 to 75. There are no outliers for either group.
